

# Sunteca

# ARCADA Fabric Tension System

Control the sun in wintergardens or glass annexes with the Arcada by Sunteca.

Stop the sun entering the interior to create a pleasant climate. The patented gas-strut pressure mechanism guarantees optimal fabric tension even at part extension. Roll down at night in winter to keep the heat in.

The cantilevered, rounded cassette protects the fabric against dirt, leaves and pollution when not in use.

Fabric, hardware and architectural elements of the building can be colour co-ordinated to unify the structure.

The Sunteca Arcada will protect the vertical as well as the sloping face and can even be free standing, supported on posts.

The electric motor can be fully automated with the addition of weather sensors.

Maximum width 5M Maximum projection 6M
