## ALL SEASONS RANGE

## CREATIVE ARCHITECTURAL SOLUTIONS FOR ALL SPACES

In some cases the design of the space may not invite new shapes or angles. For such applications we offer a range of custom made fabric shapes that allow for the system itself to be installed flat while the specially patterned fabric allows for water to drain away to one side of both depending on the project requirements. Using the latest design software your system will be drawn and plotted by our 15m custom made computerized cutting machine which is the largest of its kind in Australia. Each system will be assembled by hand to ensure the perfect result for each and every project.

## INTELLIGENT CONTROL SOLUTIONS FOR YOUR ALL SEASONS SYSTEM

We offer a large range of Somfy control options to operate your system. In addition optional wind or rain sensors can also be integrated with your installation for automatic operation.

Rain Sensor

Wind Sensor

## DESIGN SERIES

The **Design** series is installed to an existing wall or supporting frame and is supplied with its own frame work and posts. Unlike other models the **Design** Series has no front beam or gutter up to 5m projection offering unobstructed views. For systems over 5m projection a slimline architectural aerofoil louvre fin is integrated along the front edge for structural support. Ideal for applications where the perfect outlook needs to be left undisturbed, the **Design** series can protect small or large areas.

## NOVO / SMOOTH SERIES

The **Novo/Smooth** series is anchored onto an existing wall or structure and is installed with its own frame work, posts and integrated gutter system to offer motorised sun and rain protection for indoor/outdoor living. Available in custom-made sizes with a large range of mounting options these models can easily cover large areas in single systems or couple multiple systems side-by-side for greater flexibility.

## PURE SERIES

The **Pure** series offers the option to integrate the benefits of the **All Seasons** system into a new or pre-existing structure for streamline appeal. Utilising a structure made of steel, wood or even stainless steel, the sleek design of this model offers endless possibilities and when incorporated together offers flexibility to work in with surrounding architecture for unrivalled aesthetic appeal.

## ALL SEASONS

Helioscreen is one of Australia's leading awning brands and the **All Seasons** folding roof awning offers users a progressive range of sophisticated systems that can withstand the elements and compliment any outdoor area.

The **All Seasons** range is the ideal system for use in private homes, courtyards, restaurants and commercial applications where the user is seeking more than just protection from the sun. Folding away at the touch of the button the **All Seasons** retractable awning is designed to ensure the user can get the most out of their area by offering the flexibility of opening or closing the system to suit the weather conditions. Utilising an architectural grade waterproof fabric the system can offer 100% rain protection to create an operable outdoor room feel for an **All Seasons** alfresco lifestyle.

The **Helioshade All Seasons** range offers an array of versatile options making it an innovative and flexible solution for many applications. A cleverly designed drive system, integrated water seals and optional recessed dimmable LED downlighting are just some reasons why the **All Seasons** is a renowned system. Innovations like these show why Helioscreen has been a market leader in Australia for over 30 years.

Using the latest European design and approval to local engineering codes the **All Seasons** range is made from architectural grade aluminium and stainless-steel fixtures that have been developed to ensure smooth operation and high durability.

Thanks to the unique high torque motor drive system the fabric is kept under tension when in use. Using optional weather sensors such as wind or rain sensors provides the added benefit of automatic control even when the user is away.

## HELIOSCREEN'S INDOOR AND OUTDOOR RANGE

## THE SOURCE

When we say “made from the highest quality European components” we really mean it! Helioscreen’s approach to quality is second to none. Whilst some companies may market their products as designed in Europe or German engineering, what they may be hiding is that none of their products are made or manufactured in Europe or Germany thanks to a play on words. Helioscreen sources the highest level of quality parts possible according to the strictest European standards with the majority of components designed, engineered and manufactured in Austria, Germany and Switzerland, and partnered with Somfy motors and controls from France which have sold over 100 million motors in the market. If you have any questions at all, feel free to get in touch – we are always pleased to advise why we have the very best products in the market.

## TRIED & TESTED

Made in Australia, used in Australia, proven in Australia. After more than a quarter of a century of feedback from Australians, Helioscreen knows what makes the perfect awning for our conditions. Australia’s high UV and extreme coastal environment is one of the harshest in the world, which is why our team are working continually to improve each and every detail of our products. Manufacturing locally ensures we provide nothing but the best quality products to our customers. From the unrivalled 4 cable set in our articulated arms, to the stitchless bonded fabric joins in our awning covers, there is a reason we continue to grow year on year. Leading the architectural shading market for decades, Helioscreen is known to set the market trends by working on an extensive list of high profile projects each year. Whether it be a stylish residential home through to a shopping centre development and everything in between, Helioscreen is the name that Australia’s leading architects and builders call on for their operable shading needs.

## WHY BUY A HELIOSCREEN AWNING?

Based on Sydney's Northern Beaches, our products have been proudly locally manufactured for over 30 years. Buying an Australian made Helioscreen awning that is assembled from the highest quality European components, means you receive your premium awning in a timely manner without costly airfreight, and in a colour that matches your requirements. Manufacturing locally gives us the ability to powder coat your new awning to the colour of your needs. Do you have a Dulux finish on your home? Colourbond gutters? No problem - as we use local suppliers for the perfect colour match to your home, with Dulux or Interpon colour ranges.

## PRODUCT SUPPORT

Have you ever tried to source a spare part for an imported product, or get a repair done by a local agent/importer that has minimal knowledge of your awning because it was made overseas?

While we have seen several local companies importing finished awnings come and go over the years, all Helioscreen awnings are made from parts we stock in our Sydney factory. Unlike many car parts, awning components are generally unique to each make and model, meaning finding a spare part to suit is often only available from the original supplier. With over 3000sqm of manufacturing space and state of the art machinery, we can service your after sales needs.

In the rare event that a spare part is needed for repair or maintenance, we can normally have it available for collection or dispatch to your dealer immediately in stock colours. This means no waiting for feedback from European suppliers and no prohibitive airfreight costs - just your part on its way without delay so your awning is back in use ASAP. Replacement awning fabrics, motors, controls and sensors are also stocked in Sydney for immediate response to your needs.
